Radiation Exposure + Contamination: Diagnose and Manage

ASSESS EXTERNAL CONTAMINATION
- Contact radiation safety officer
- Put on Personal Protective Equipment
- Assess contamination pattern with radiation survey meter
- Evaluate for radioactive shrapnel
- Document contamination pattern on a body diagram
- Swab each nostril separately to help estimate level of internal (lung) contamination

DECONTAMINATE WHOLE BODY
- Decontaminate either on-site or at other designated areas
- Follow decontamination procedures
- Re-scan patient with radiation survey meter
- Repeat decontamination until successful (Understand target levels for decon)
- Do not exceed 3 attempts (decon cycles)
- Special issues for infants and children

EVALUATE IF ALL ARE TRUE:
- Decontamination successful (Understand target levels for decon)
- Absent or minimal physical injury
- Whole/partial body dose from exposure likely to be < 2 Gy

YES
- Send home with follow-up instructions
- Register in incident database

NO
- Evaluate at medical facility

On-site / Prehospital
Medical Facility / Hospital

EVALUATE AT MEDICAL FACILITY
- Treat life- or limb-threatening injuries first
- Obtain serial CBCs with differential to evaluate possibility of exposure and ARS
- Remove any remaining radioactive shrapnel and shield it safely
- Surgical window of about 36-48 hours, depends on rate of dropping blood counts
- Treat non-life-threatening problems

CAUTION: MANAGEMENT MODIFIERS
- Burns
- Trauma
- Mass casualty
- Timing of surgery
- Blood products use
- At-risk/special needs populations
ASSESS INTERNAL CONTAMINATION
- Scan patient with radiation survey meter (caveat)
- Incident responders or radiation safety officer will identify the isotope(s)
- Swab each rectum separately to help estimate level of internal (lungs) contamination
- Collect ≤70 mL spot urine sample for isotope measurement
  - Instructions for sample collection, labeling, packaging and shipping
  - Consider total body radiation survey with modified hospital nuclear medicine equipment

TREAT INTERNAL CONTAMINATION OF SPECIFIC ISOPODE
- Isotopes of Interest Table
- Countermeasures Table
- Decision to treat will depend on
  - Level of internal contamination
  - Size of radiation incident
  - Availability of resources/personnel
  - Likelihood that patient will survive

DIAGNOSE/MANAGE EXPOSURE - ACUTE RADIATION SYNDROME

SURVIVORS
- Discharge with appropriate follow-up instructions
- Register patient in incident database
- Radiation follow-up considerations
  - Whole body dose
  - Immune status
  - Risk of cancer
  - Risk of specific organ dysfunction

DECEASED
- Management of decedent with contamination
- Register decedent in incident database
